

The Twinkie Guide to Nanotechnology

October 22, 2007

New Video Uses Snack Food to Help Unlock Mysteries of Nanotech

WASHINGTON- [The Twinkie Guide to Nanotechnology](#) is an entertaining new video featuring scientist Andrew Maynard which mixes the iconic American snack cake with humor to unlock the mysteries of nanotechnology.

Andrew Maynard

Maynard serves up the complexities of nanoscience in enticing, digestible, bite-size morsels. It is a friendly, funny, 25-minute travel guide to the technology that promises to ignite the next industrial revolution. In the video, Maynard shows products that use nanotechnology today. And he travels into the future to demonstrate how nanotechnology will change virtually everything—in medicine, energy, materials, travel and electronics.

Nanotechnology is the ability to measure, see, manipulate and manufacture things usually between 1 and 100 nanometers. A nanometer is one billionth of a meter. A human hair is roughly 100,000 nanometers wide.

One of the hardest concepts to convey about nanotechnology is the unbelievably small scale. “Putting a nanoparticle on a Twinkie is comparable in scale to putting a Twinkie on the moon,” said Dr. Maynard. “It is difficult for people to imagine gold, silver, carbon or platinum the size of one nanometer. Without a microscope, the human eye cannot see anything below 10,000 nanometers.”

The Twinkie Guide to Nanotechnology can also be found at the website for [Consumers TalkNano](#).

Consumers TalkNano. is an exciting online discussion taking place over two days, October 23-24, 2007. The Project has collaborated with Consumers Union, publishers of Consumer Reports, in an effort to jumpstart a conversation with consumers about the possible benefits and risks of nanotechnology.

Any interested member of the public will be able to communicate online throughout the two days (October 23-24) with panelists from the Project, Consumers Union and others. The dialogue is free but participants must

SUMMARY

The Twinkie Guide to Nanotechnology is an entertaining new video featuring scientist Andrew Maynard which mixes the iconic American snack cake with humor to unlock the mysteries of nanotechnology. In this 25-minute short Maynard serves up the complexities of nanoscience in bite-size morsels.
